

PHYSICS LAB

“Without laboratories, the men of Science are Soldiers without Arms”

Physics Lab is always treated as the epicentre of scientific activities. It helps to sketch and also to implant scientific temper in students. Lab set the children innovate; come across real life situations and relate the discipline of physics with nature and natural phenomena.

The Physics lab in our school provides all the desired support systems for formal as well as informal lab activities and experiments. The lab is spacious, well equipped and cross ventilated. The lab consists of a wide variety of physics lab equipments.

Lab Features are:

- To reinforces the theory class with required physics lab experiments to stress the fundamental concepts of physics.
- To make the students understand how physics lab equipment is to be used.
- To make the students aware of the inherent doubt of the measurements.
- To make the students know the importance of direct observation as compared to inference based on theory.
